

EZ Notes Boosts Student Productivity

By Alexander Madani

In any student environment, concerns surging to the forefront include the ability to organize as fast and effortlessly as possible. The advent of mobile devices and various Apps by developers has opened up new and exciting capabilities. People are increasingly using their smart devices for organizing and sharing data. The overabundance of Apps on App Stores make it challenging to inform users about the precise benefits and intended purpose behind an App. Resources such as this article aim to provide a better glimpse into the benefits and purpose behind Mobility Organizing. Developers spend countless hours and lines of code, to architect solutions. However, only the few truly innovative and useful Apps are the ones that people seek and download. A great app should not only be reliable, but also be easy to use and highly Optimized in addressing specific “Pain Points” that users wish to solve. In this article, you will learn about one such extremely useful Organizer simply called EZ Notes (optimized for Smartphones).

In developing EZ Notes, the following important questions guided the development of EZ Notes for Android. The developer asked himself:

- Is all Software the Same?
- Does it Matter what environment (setting) the Software will be used in?
- Are there differences between Apps tuned for Smartphones vs. Tablets?
- Does it matter how quickly and easily data is created and accessed?
- Are all Notes and changes made to those notes made in the same way?

With EZ Notes, all these sorts of questions were examined carefully, in order to best address the needs of our target audience. Unsurprisingly, all software is NOT the same! Organizing Techniques and strategies vary depending on the software and the platform being utilized. Software such as EZ Notes (optimized for fast use on a smartphone) needed to work differently than software designed for Tablets (due to form factor and hardware differences). Although many Apps might claim that they are suited for ALL form factors, the reality is

often quite different. In general, Apps are usually suited (optimized) for one type of form factor experience versus others. Furthermore, we also need to understand that apps optimized for everyday Organizing needs clearly need to behave differently than say a Spreadsheet App, a Social media App, or a Fitness App. Different scenarios and environments require different solutions and methodologies for accessing and changing data. So for example, a Spreadsheet App designed to keep track of customer inventory data, will likely take more time and attention to enter and modify customer input fields, versus an everyday organizer that needs to address portability, speed, and daily comfort.

With the aforementioned considerations in mind, we now discuss the amazing advantages and focus behind EZ Notes for Mobile Organizing. We examine some typical “Pain Points” and truths about the fast paced demanding lifestyles of a student that EZ Notes addresses. In addition, we discuss a few specific features that help explain why EZ Notes makes the best Companion App for students.

There are several important truths and considerations concerning Student Life:

- There is a lot of information and events for students to keep track of.
- Time is short and extremely valuable.
- University students (friends) are often geographically dispersed in various campus locations and need the ability to share data and plan meetings.
- Students attend a fixed set of courses and are expected to be organized
- It’s extremely impractical (and uncomfortable) for a student to constantly have to reach for pen and paper to quickly create and find Notes. Backpacks are heavy and burdensome to constantly lift, open, then close
- Students need convenient tools helping them organize their Schedules, Lecture Notes, Assignments, and be able to share vital data with friends.

We can see that there are quite a lot of these sorts of mobility challenges that face any student, at any level of learning. A typical university student enrolls in perhaps 3 or 4 courses per Quarter/Semester. However, with each course there is often accompanying Labs, Instructor Office Hours, TA Office hours, Assignments, and many other campus related news and events to keep track of.

Hence, a student with 4 classes finds him/her self with more like 12 – 15 classes to keep track of. And they need to process and organize all that information quickly and effortlessly in their highly mobile and dynamic student environment. An Organizer for such an environment needs to be fast and extremely convenient at keeping pace with the student. Such an organizer also needs to save tremendous time and effort for creating, finding and accessing data. Always scribbling Notes using traditional Pen and Paper is no longer sufficient and convenient for the modern active student. They need a great companion App that keeps toe-to-toe with their demanding schedules.

Having discussed some of the “Pain Points” in a typical student schedule (and the great need to organize quickly and easily), we now introduce and examine EZ Notes in a nutshell. As mentioned, EZ Notes is an Android (smartphone optimized) solution. This means that while EZ Notes does run fine on an Android Tablet, it is most suited and optimized for the smaller form factor of a smartphone. And this is a good thing because Smartphones are far more popular and ubiquitous than Tablets. The lightweight and slim nature of a smartphone, make it an ideal device for portability and convenience. Hence, EZ Notes was developed and optimized for that platform.

When a user launches EZ Notes, the very first thing they notice is how Clean, uncluttered, and inviting the App feels on their Smartphone (compared to other Apps). EZ Notes loads instantly with zero hindering sign-ins or sign-ups. There are zero annoying Advertisements to drain the user’s battery charge, or distract the student from focusing on tasks at hand! The use of nice large icons and fonts, along with very cool layout colors, immediately gives the user a sense of Welcome and Control over their App. Furthermore, users appreciate having ALL the main functions right up top within EZ Instant Reach of their fingertips. All these are unique and deliberate design consideration of EZ Notes, because many Apps exhibit excessive digging, clicking, searching and looking around for accomplishing simple daily tasks. EZ Notes places all functions conveniently up top, where the user’s eyes are naturally looking most of the time. Furthermore, by placing all functions within Instant Reach, EZ Notes saves great time, while completely eliminating the need for any Hidden “Navigation Drawers.” A

student need not bother spending time learning anything extra, nor having to hassle clumsily prying open (pulling open) any hidden sorts of UI elements every time they need to accomplish a task. EZ Notes uses fantastic Voice feedback to give App status alerts, along with a cool “Head-Up” display unit up top, to indicate user and software performed actions! Tapping the EZ Folders icon immediately reveals the status of all Notes in various folders, instantly available to the user for processing. Such features in EZ Notes serve help users stay aware and alert, while boosting their: Speed, Comfort, Mobility, and User Productivity (confidence). Few smartphone Apps offer this level of automation and convenience customizations for the user. This is because everything in EZ Notes was painstakingly designed from scratch, to be as Direct and Effortless as possible (thereby making EZ Notes truly non-intimidating and a wonderful place to spend your time in under any circumstance.)

We now turn our attention to a bit more detail about what specific features are unique to EZ Notes, and custom tailored for high automation. Indeed, one of the best facilities in EZ Notes for instantly recording memos and quick thoughts is its award winning Voice Recognition Capabilities. The student can speak a few quick sentences of thought in English while on-the-go (and short on time) completely “Hands-Free.” These voice notes Pop-Up and save immediately on the Screen (without requiring any interaction or use of the editor up front). For example, perhaps a student needs to rapidly create a memo about a Quiz in Physics on Friday on the topic of Optics and calculating reflection and refraction angles. They can create such notes very quickly and easily using natural spoken language. Then later (at a time of convenience), they can single tap the Note item to enter the “EZ Editor,” where they can type or speak additional relevant details about the exam (and easily share with classmates.) The “Hands-Free” nature of Voice Notes in EZ Notes, make it extremely automatic and ideal tool for mobility and smartphone convenience. All notes (with the exception of Color Canvas Sketches) are stored in the most efficient lightweight (text-based fashion), so help conserve great Storage Space and avoid burdening the student’s smartphone Resources. Mainstream Apps store large Audio Clip files and Photos, which quickly take up precious space.

Another very handy benefit of the EZ Editor is that there's no hassle or bloatware to distract or otherwise hinder productivity. With a single tap on a Back Arrow on the top toolbar, the user instantly exits the Editor and simultaneously saves their Note (complete with an updated date time stamp). Many such automatic "single-tap" features in the product help save time and effort for students. In addition to these types of "Single-Tap" automatic functionalities, EZ Notes provides many other conveniences such as: Swift Swipe Gestures, Automatic Archival, Automatic Trash Bin, Instant EZ Folders, Rapid Searching, Automatic Sharing, Cross App communication, Web Services, and beyond ! The comprehensive set of Web Services include: Sharing notes, searching the web, Shopping Amazon, Price Comparisons using NexTag, Travelocity, Ebay, Facebook, Dictionary Lookup, Medical Terminology, and more. EZ Notes is one of the only Apps that empowers the user with a wide host of these kinds of "Web Services" and capabilities.

In conclusion, we have seen that Organizing effectively on different platforms and in mobile scenarios, requires software specifically engineered and optimized to keep pace with your needs and help expedite your life. EZ Notes is a new modern App that was specifically designed and optimized to be the most focused and EZ to use smartphone Organizer of its kind. We have overviewed the enormous benefits for students who need to instantly create, search and share Data, in their fast paced environment. Hence, EZ Notes is one of few (if not only Apps) that perfectly addresses today's demands for high efficiency, cloud connectivity, mobility, and speed of task execution. That's precisely why so many users who are downloading EZ Notes are rating this App so favorably for such the many benefits it delivers. Families use it for shopping and payment reminders, Lab technicians use it for organizing critical lab data & tasks, Students use it for School, and Health Care professionals use it to organize their tasks and vital patient care information. Few other Organizers offer such a fast and well-rounded set of features for a enjoyment by Everyone on their smartphone. Unsurprisingly, due to all the aforementioned benefits, EZ Notes is quickly growing happy world-wide customers.
